Genetic Resources of Winterfat

Krascheninnikovia Gueldenst.

Saint Petersburg
2018

Dzyubenko, Nikolay I. Genetic Resources of winterfat *Krascheninnikovia* Gueldenst / Nikolay I. Dzyubenko, Yuri D. Soskov, Albina A. Kochegina ; editors doctor biol. sci. E.A. Sokolova, cand. biol. sci. I. G. Chuhina. – SPb. : VIR, 2018. 168 p.

ISBN 978-5-905954-66-5

Using the classical geographic and morphological method of taxonomy with additions made by the authors, the monograph presents taxonomic study of the polymorphic North American-Eurasian genus *Krascheninnikovia* Gueldenst. A description of species, sections, and series is given. Particular attention is paid to the economically important for the selection in our country species of this valuable unique fodder and phytomeliorative plant winterfat *Krascheninnikovia ceratoides* (L.) Gueldenst. and *Krascheninnikovia ewersmanniana* (Borszcz.) Grub.

Based on the principles of eco typical selection, a methodology for identifying intra-specific winterfat taxa has been developed. The GIS map of the zone of the growth of the winterfat common, made according to herbarium specimens and literary sources, is included in the book. Besides, areas of all kinds are represented.

The results of a 90-year study of the genetic resources of these two most drought and salt tolerant species of arid and semi-arid perennial fodder rainfed half-shrubs which successfully used for the restoration of degraded pasture phytocenoses are generalized. Their agrobiological and phytomeliorative properties are described, as well as biogeocoenotic technologies for the use of winterfat in polycomponent agrophytocenoses. The history of the introduction of these species into culture is considered. A description of the five varieties created in Russia and the CIS countries is given. For the first time, data are presented for a 20-year study of samples of the winterfat collection in the conditions of the Aral Sea Experimental Station of VIR. Replenishment of the collection continues in our time. Recently discovered biologically active compounds open wide prospects for its use in veterinary medicine and medicine.

The book is addressed to resource scientists, geneticists, breeders, environmentalists, teachers and students of biological and agricultural higher education institutions, farmers and agricultural and forestry specialists.

CONTENTS

Preface	8
Introduction	10
Introduction of winterfat in culture	14
Chapter 1. SYSTEMATIC CHARACTERISTIC OF WINTERFAT	18
1.1. General Information and Features of the Genome of the Family Chenopodiaceae Vent.	18
1.2. History of the Study of the Genus <i>Krascheninnikovia</i> Gueldenst.	19
1.3. System of the Genus <i>Krascheninnikovia</i> Gueldenst.	21
1.4. Genus <i>Krascheninnikovia</i> Gueldenst.	22
1.5. The Key for Identifying Species	23
1.6. Taxonomic Description of Sections, Series, Species and Ecotypes of development of winterfat	24
Chapter 2. BIOLOGY OF THE DEVELOPMENT OF WINTERFAT	41
2.1. Variability of the Morphometric Features	41
2.2. Ontogenesis	46
2.3. Seasonal Development of Winterfat Species	48
2.4. Resistance to Cutting and Mowing	57
2.5. Embryology	58
2.6. Development of Generative Organs, Types of Pollination of Flowers, Fertilization	60
2.6. Root Systems of Species	66
Chapter 3. RELATION TO ENVIRONMENTAL CONDITIONS	73
3.1. Drought Resistance	73
3.2. Salt Resistance	76

3.3. Water Regime, Concentration and Osmotic Pressure of the Cell	78
3.4. Features of Photosynthesis.....	80
3.5. Reserve Nutrients.....	82
3.6. Relation to Low Temperatures	83
Chapter 4. CHEMICAL COMPOSITION AND FODDER ADVANTAGES	84
4.1. Protein and Other Nutrients	84
4.2. Aminoacids	87
4.3. Macronutrients	87
4.4. Microelements	90
4.5. Vitamins.....	91
4.6. Carbohydrates	92
4.7. Biologically Active Substances	94
Chapter 5. FUNGAL DISEASLS AND PESTS.....	96
Chapter 6. AGRITECHNICAL METHODS OF CULTIVATION	98
6.1. Soil Preparation, Germination of Seeds, Timing and Rate of Sowing	98
6.2. Methods of Sowing and Care of Crops.....	100
6.3. Yield of Fodder and Seeds.....	101
6.4. Cleaning and Drying of Seeds	102
6.5. Creation of Seed Plots of Winterfat	104
Chapter 7. SELECTION AND GENETIC CHARACTERISTIC OF WIN- TERFAT	107
7.1. Source Material for Breeding	107
7.2. Numbers of Chromosomes, Polyploid Series	110
7.3. Varieties.....	111
Chapter 8. AGRIBIOLOGICAL STUDY OF THE WINTERFAT COLLEC- TION IN THE NORTH ARAL SEA REGION	116
Chapter 9. CREATION OF SUSTAINABLE PASTURE ECOSISITEMS WITH WINTERFAT.....	129
Chapter 10. WINTERFAT AS A PHYTO-MELIORANT.....	140
Chapter 11. EXPERIENCE OF THE VIR SCIENTISTS IN THE STRUGGLE WITH DESERT EXPANSION	144
Conclusion	151
Literature.....	154
Colour photoes of winterfat
